CIS 147

Internet Publishing

Welcome to CIS 147-770 Internet Publishing. In this class you will learn how the WWW (World Wide Web) works, how to create a Web site and how to publish your Web sites to the World Wide Web so that other people will be able to access your work. You will learn how to work with text, graphic and navigation system to create interesting and effective Web site.

Instructor Information

John Putz Adjust Faculty Computer Science and Information Division

All e-mail for this class is to be done on the D2L system. It is important that you contact me immediately if you have questions or are having any problems as you complete this course.

Textbook

There is no text book, you will be reading current information related to Web design found on Web sites and doing Tutorials that are part of the program we will be using in this course

Web Design Program

You are expected to purchase and install the Web design program WebPlus X2, also you are expected to have access to a personal computer **that is running a Windows operating system either XP or Vista (the program is not comparable with Mac computers). Also, there are no computers on campus on which this program is installed.** This program is available through the ECC bookstore as a package of CD's and manuals. I strongly recommend that you purchase the software through the book store so that you have all of this material in one place and can access it easily.

You can download the program from the Serif Web site. You must know how to download large files on the Internet to directly purchase the program. You also do not automatically obtain the additional materials from the Serif site, you have to find them and is some cases purchase them separately. I would recommend obtaining the CD of the program from the bookstore unless you are absolute sure that you know how to download and install software over the Internet.

Class Work

There are two things you will be doing in this class, studying information about how to effectively create, producing and publishing Web pages and Web sites.

Worksheets

To help you effectively read the assigned reading worksheets have been created. On the work sheets you will find the reading assignment and questions I want you to answer from the reading. Each question on a worksheet has a point value of one or more point. Every worksheet will have a different value base on the number of questions. The worksheets are in Microsoft word 2003 format. You download the worksheets from the links on the Web site answer the questions and then submit the worksheets through the appropriate drop boxes on the D2L web site.

Web Projects

Every Web project will have a number of points based on its complexity.

Submitting Work

All projects may be completed and submitted before the due date. The submission process:

For worksheets you submit them in the appropriate drop box on the D2L class web site.

When you complete each Web page project you send me an e-mail on the D2l e-mail system telling me you have completed the project and it is ready for viewing.
